Coordinators comments

This year the course was taken by 17 registered students, and 11 of the students has handed in at least one of the home exercises.

The students that responded to the evaluation (3) were overall satisfied with the course, and thought it was a good overview of functions and processes in Excel.

Suggestins for improvement was to ensure that the same person run the program and describes what to do. The current way (one person telling, the other one doing) is established to ensure that the pace is sufficiently slow for everyone to follow. Several students mentioned it orally during the course as a good way of slowing things down, but probably it is most beneficial for students who does not already know the methods that are shown. Also the home exams were brought up as time consuming, especially if the task covered methods that were not applicable to the area the student was working in. The home exams covers a wide range of techniques, but we will look through them to see if there are tasks that can be canged or removed.
